Chain of Custody and Sample Information for Aerobiology Project Number #61721

Wednesday, April 19, 2006: Received, two cloth samples for Total Aerobic Bacteria Count

Summary of Sample Results: Colony Forming Units (CFU) per gram of sample

	Sample	Test	Test Results CFU Wrap	Test Code
1	Treated 50ppm	Total Bacteria Count	18 cfu	5031
2	Treated 100ppm	Total Bacteria Count	<3 ND	5031

<3 ND = none detected

Testing Methodology

APHA Standard Methods (9215C) were used for detection and enumeration of target microorganisms and at recommended dilutions. All samples were rinsed, mixed and wash to remove viable bacteria. 100mL of rinse was filtered to collect low numbers of bacteria. Filters were plated onto TSA media and counted at 24 hours

On behalf of the staff at Aerobiology Laboratory Associates, we would like to thank you for the opportunity to assist you with your microbiology testing needs.

Kirk Hartwein, B.S.
